

## Foldable 3-in-1 Wireless Travel Charger User Manual

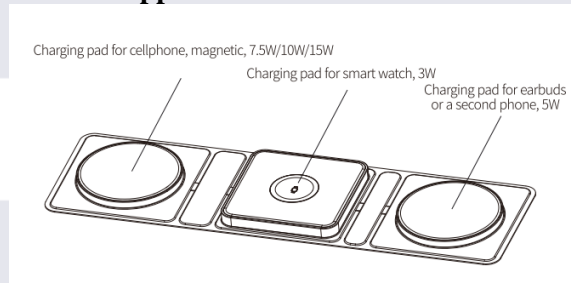

Made in China

### Product Description

Thanks for your choosing our fold-able 3-in-1 wireless charger. This product has three wireless charging pads and allows charging your iPhone, Air Pods and Apple Watch at the same time. It supports wireless charging of most Qi-compatible products. Preformed fold-able textile wrap, portable compact size and high integration help you stay organized on desktop or while travelling.

### Product Appearance

### Instructions

1. The product should be used with a 18W wall charger at least and type c charging cable. Simply plug the wall charger into AC outlet and connect the charging cable with the wireless charger.
2. Both indicators turn on or about is to indicate the active power input, and then turn off.
3. The cellphone indicator turns on blue while the cellphone is placed on the phone charger pad and starts charging. The earbud indicator turns on blue while the earbud is placed on the earbud charging pad and starts charging.
4. The indicators start slow flashing when the device is not placed or aligned properly, or the wireless charging connection is not established properly, such as large gap caused by some type of phone case. Adjust the positions or remove the phone case and check if the indicator shows normal charging.
5. When the device is full charged, simply pick it up from the pad to terminate charging.

### Note:

Underrated charger or cable may cause wireless charging slow down or failure.

Samsung Note 10,9,8,7,S7,S7 Edge,S6,S6 Edge,S6 Edge Plus  
This product has been designed as per Qi specifications. For any questions or issues on compatibility, please contact us.

### Precautions

1. With the wireless charging technology, the induction coils shall be aligned properly so that the communication is established and battery charging can begin. The magnets in the phone charging pad are compatible with MagSafe iPhones and ensure accurate alignment or the non-MagSafe models, you may have to align them manually.
1. The wireless charger has a type-C socket and accepts input 9V 2A or above. A 20W power adapter and type-C charging cable are recommended for most of your most uses. You may also power the wireless charger from another type-C source such as type C interface of laptop. Check the power ratings of the interface and make sure it can provide enough power.
3. The wireless charging distance is up to 4mm. Most nonmetallic cases are acceptable for wireless charging. Some thicker case on your phone, earbud or watch may cause failure of wireless charging.
4. The wireless charger has temperature detector inside as a kind of protection. When the temperature increases above 45°C, wireless charging stops, and resumes when the temperature drops. With some devices that are not well compatible, the temperature may appear a little high. Pay special attention to the temperature rise in that case.
5. Avoid high temperature or humidity while using the product.
6. Avoid drop or strong impact. The tempered glass may be broken, or the internal electric circuit damaged.
